

Category	Description	Reviewers Comment	Action taken by reviewed group
Build	Could you clone from Git and build using the README file?	No because I do not have an android device and was told it does not work properly on an android emulator.	
Legibility	Was the flow sane and were variable names and methods easy to follow? Does the code adhere to general guidelines and code style?	It seemed alright and was easy to follow. Some more comments would be nice and delete lines that are commented out.	
Implementation	is it shorter/easier/faster/cleaner/safer to write functionally equivalent code? Do you see useful abstractions?	Using json files for select data instead of the objects in StaticData.js might be easier for the client	
Maintainability	Are there unit tests? Should there be? Are the test covering interesting cases? Are they readable?	No included tests. Tests for database interactions might be helpful if at all possible.	
Requirements	Does the code fulfill the requirements?	Yes	
Other	Are there other things that stand out that can be improved?	Just more comments could be helpful, especially in the js files.
