Category	Description	Reviewers Comment	Action Taken
Build	Could you clone from Git and build using the README file?	Instructions were solid, however running this code required a physical android device. The group is looking into making it work on an emulator.	
Legibility	Was the flow sane and were variable names and methods easy to follow? Does the code adhere to general guidelines and code style?	There are a few unused files lingering in the repository. As well, there are a couple of empty files. Code style is somewhat consistent, however some javascript files are strict about using semicolons, where others are not.	
Implementation	Is it shorter/easier/faster/cleaner/safer to write functionally equivalent code? Do you see useful abstractions?	One case where functionality could be improved is in the queryDB function found in picker.js. Instead of defining success and failure callbacks in the queryDB, it might be better to pass those functions in as parameters.	
Maintainability	Are there unit tests? Should there be? Are the tests covering interesting cases? Are they readable?	There are no unit tests.	
Requirements	Does the code fulfil the	From the demo given, I would	

	requirements?	say that the code fulfils the requirements.	
Other	Are there other things that stand out that can be improved?	Code style is pretty inconsistent, in regards to filenames, semicolon usage, and curly brace placement.
