Group 38

Category	Description	Reviewers Comment	Action Taken be Reviewed Group
Build	Could you clone from Git and build using the README file?	I personally couldn't get it to build but that's because my android studio has been constantly crashing	
Legibility	Was the flow sane and were variable names and methods easy to follow? Does the code adhere to general guidelines and code style?	There's commented out lines that I think should probably just be deleted for readability if they're not going to be in production	
Implementation	is it shorter/easier/faster/cleaner/ safer to write functionally equivalent code? Do you see useful abstractions?	Changing data is really unfriendly for users to change. A better way to change data instead of editing XML files would help	
Maintainability	Are there unit tests? Should there be? Are the test covering interesTIng cases? Are they readable?	There weren't any tests, some might be useful	
Requirements	Does the code fulfill the requirements?	Yes they met all the requirements	
Other	Are there other things that stand out that can be improved?	No
